MANIKANTA YARRAMNEEDI

Python Backend Developer (Fresher) | FastAPI | PostgreSQL

Hyderabad, India | Open to Relocation | +91 8686873899

Email: manikanta.yarramneedi.home@gmail.com | GitHub: github.com/Maniprogramer

CAREER OBJECTIVE

Motivated Python backend fresher with hands-on project experience building REST APIs using Python, FastAPI, and PostgreSQL, including freelance project work. Practical exposure to designing CRUD-based systems, implementing secure authentication (JWT, OAuth2), async programming, database optimization, error handling, and containerizing applications with Docker. Also familiar with Flask and currently learning Django. Eager to learn, take ownership, and contribute to a backend engineering team.

EDUCATION

Master of Computer Applications (MCA) — *KIET College, Korangi* **2023 – 2025**

B.Sc. in Artificial Intelligence and Robotics — *Ideal College of Arts and Sciences, Kakinada* **2023**

TECHNICAL SKILLS

Languages: Python, SQL

Backend: FastAPI, Flask, Django, REST API Development, API Design, CRUD Operations, Async Programming

Databases: PostgreSQL, SQLAlchemy, SQLite, Database Optimization

Security: OAuth2, JWT, Bcrypt

Tools: Git, Docker, Postman, Linux, Pytest

Cloud: AWS (Basics), CI/CD Concepts

Data & ML (familiar): NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, TensorFlow, PyTorch, Machine Learning

PROJECTS

Freelance Backend Projects — *AhamVerse Technologies (freelance)* **Mar 2024 – 2025**

- Developed REST APIs using Python and FastAPI as part of freelance project work.
- Implemented CRUD operations following API design principles.
- Built async APIs to improve performance and efficiency.
- Implemented secure JWT and OAuth2 authentication.
- Optimized PostgreSQL queries and database indexing to reduce latency.
- Handled request validation and exception handling workflows.

Scalable E-commerce API

- Built CRUD-based APIs with filtering and pagination, achieving 25% faster data retrieval.
- Implemented standard authentication workflows and containerized deployment using Docker.
- Added rigorous request validation and structured global error handling.

Secure Auth API

- Built a secure authorization system implementing standard OAuth2 and JWT protocols.
- Implemented secure password hashing (Bcrypt) and validation.
